

Noda I

Noda lamps are made from an eco-responsible composite, formulated with recycled cellulose. Cold processed, this solution can be molded or shaped.

Mass-dyed with natural pigments, the collection is made up of 7 shades, however the color possibilities are endless. Textured, smooth, matte or glossy finishes are possible.

Each piece is unique, with variations in appearance that add to its authentic nature.

Colors

Resulting from the research of our experimental studio within our parent company Cogitech, the Noda lamp is inspired by the plant world by displaying an organic design reminiscent of the birth of a tree branch.
